Updating the Slideshow

Author: Nathan Wilke

**People Involved:** App's Current Owner

Viewing Permissions: Admin

Purpose: The landing page of the website has a slideshow containing photos from TAMUWake. As the club ages, it may be useful to swap out the photos in this slideshow to represent the current state of the organization. This document outlines how the owner of the app can change the source code to add new photos, remove old photos, and even add in a video to the slideshow.

Instructions:

1. **Access Source Code**
    a. To find out where the source code is located, navigate to the Heroku page of the production app and then go to the deploy tab. Under this tab, the section "App connected to GitHub" will have a link to the source code.

        i.
    b. If the source listed is texasnathan01/TAMUWake, that means it app is still running off of the code in Nathan Wilke's private repository. This is most likely, as this is how the development team left it when it was turned into the president of TAMUWake at the time.
        i. If this is the case, you can attempt to request access to this repository. To do this, simply send an email to the owner of the repository at texasnathan01@gmail.com.
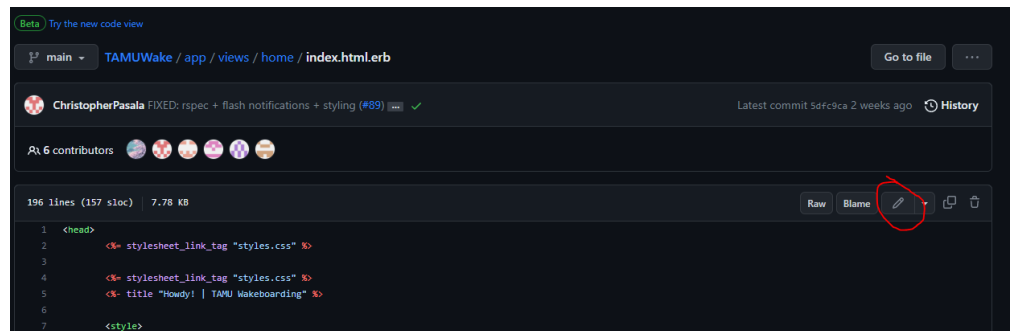

c. If you are not able to access texasnathan01/TAMUWake and do not receive a reply from him, you can make a copy of the code there using the instructions from the "Installation/Set-Up" support document.
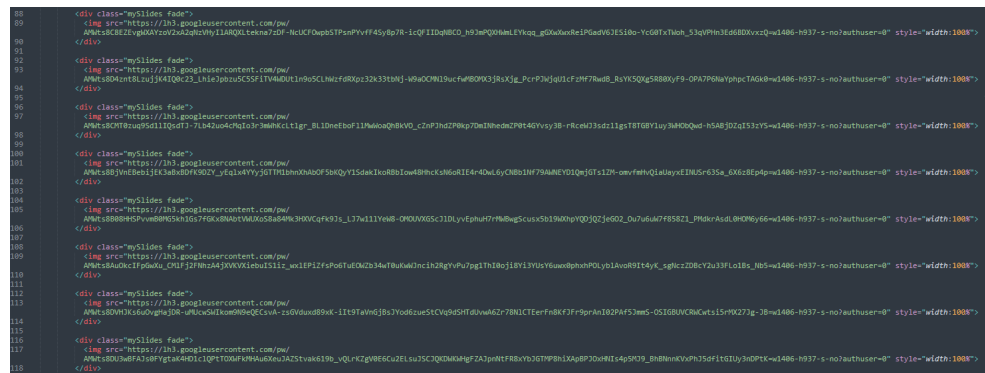

2. **Finding Home Page Code**
   a. Github has a built-in code editor, so all you need to change the photo in the slideshow is find the correct file inside of Github and start editing. The file in question you need to edit is index.html.erb, located at TAMUWake/app/views/home/index.html.erb. The associated file of this in the base repository is https://github.com/texasnathan01/TAMUWake/blob/main/app/views/home/index.html.erb.

3. **Changing the File**
   a. Once you find the right file, you can use Github's built in cod editor by clicking the button shown below:
      i.

   b. The specific lines you will want to change are shown below:

      i.

   c. Each of these lines are a slide in the slideshow. The link pasted after "img src=" is the link to the image, wherever it is hosted at. In order to remove a slide to the slideshow, delete the entire cluster of 4 lines spanning from <div class="mySlides fade"> to </div>. In order to add a new slide, simply make a copy of one of those clusters, and replace the listed image link with your new image link.
   d. If you want to embed a video into the slideshow, use the following code:

```
87
88          <div class="mySlides fade">
89              <iframe width="1406" height="937"
90              src="https://www.youtube.com/embed/tgbNymZ7vqY">
91              </iframe>
92          </div>
93
```

       i.

      ii.   Simply replace the listed link with the link to your video

e. Once you have made your changes, press "Commit Changes"

Commit changes

Update index.html.erb
